The right rose for me – I plant it and it works

PharmaRosa Ltd’s mission is to make the world’s most beautiful and most distinctive garden roses available across Europe – for you. Our programme aims to preserve the value of old, rare roses, support the creation of new varieties, and offer the most beautiful, most resilient roses to everyone who would like to grow stunning, healthy and long-lived roses in their own garden.

- What does this mean for you, as a rose lover or garden enthusiast?

Access to rare and special roses

Our selection includes many historical and collector’s roses whose preservation has been supported by passionate rose collectors and the owners of rosariums. We offer these varieties to you as a legacy, labelled with their names.

A continuously expanding range of modern roses

You will also find the latest rose varieties from our breeding partners, presented to you with outstanding ornamental value, resilience and sustainable cultivation – directly from the grower.

Results of sustainable, environmentally conscious rose cultivation

All our roses are own-root plants propagated vegetatively, produced with lower resource use, without chemicals, in an environmentally conscious way. You receive the product of a sustainable horticultural model.

Reliable quality, directly from the producer

We do not only offer roses for sale; we also ensure that they truly represent the quality we promise: healthy, long-lived, and exactly as shown in the photographs.

A community for roses

Participants in our programme – collectors, breeders, nurseries and resellers – work together so that you can take home the most beautiful and most valuable roses. When you buy from us, you receive not only a plant, but also a story, a tradition and a commitment.

Our love for roses connects us. Discover our range, become part of this special horticultural community, and transform your garden into a living sanctuary of roses!

Botanical Rose

Frühlingsduft

cream-yellow - wild rose
5.8-9ft (176-275 cm)
very strong, room-filling scented rose - classic, rosy character
Wilhelm J. H. Kordes II.

Frühlingsgold®

yellow - wild rose
5.9-9.2ft (180-280 cm)
medium-strength, clearly scented rose - clean, musky
Wilhelm J. H. Kordes II.

Glauca Carmenetta

mauve-pink - park rose
7.9-11.8ft (240-360 cm)
mild, restrained-scented rose - soft, elegant character
Isabella Preston

Rambling Rector

white - historic - rambler, climbing - trailing rose
#VALUE!
strongly scented, easily noticeable rose - rich, spicy-musk aroma
-

Rosa banksiae alba

white - species rose
13.1-26.2ft (400-800 cm)
mild, restrained-scented rose - delicately floral character
William Kerr

Rosa Banksiae lutea

yellow - species rose
13.8-25.6ft (420-780 cm)
very weak, barely noticeable scented rose - classic rose character
John Damper Parks

Rosa canina Abbotswood

pink - landscape shrub rose
#VALUE!
medium-strength, pleasantly scented rose - soft, sweet, classic wild-rose aroma
Fred Tustin

Rosa cannabifolia

pink - landscape shrub rose
#VALUE!
medium-strength, well-scented rose - delicate, sweet, classic rose scent
Flobert

Rosa foetida

yellow - wild rose
5.2-7.9ft (160-240 cm)
medium-strength, noticeably scented rose - distinctly spicy aroma
-

Botanical Rose

Rosa foetida bicolor

orange - landscape shrub rose
#VALUE!
strong, clearly scented rose - rich, sweet-spicy, slightly liquorice-anise
-

Rosa kokanica Vacratot

white - landscape shrub rose
#VALUE!
strong, long-lasting scented rose - scent description not available
-

Rosa moyesii 'Eos'

pink - wild rose
6.6-9.8ft (200-300 cm)
very weak, barely noticeable scented rose - scent description not available
Ruys

Rosa omeiensis pteracantha

white - landscape shrub rose
#VALUE!
mild, restrained fragrance rose - delicate, sweet, slightly oily scent
-

Rosa paulii

white - wild rose
2.3-4.3ft (70-130 cm)
mild, restrained-scented rose - pleasantly spicy
George Paul, Jr.

Rosa pimpinellifolia Frühlingsmorgen

pink-yellow - landscaping shrub rose
#VALUE!
medium-strength, clearly scented rose - muscatel, wild-rose–violet, light floral
Wilhelm J. H. Kordes II.

Rosa pimpinellifolia Marbled Pink

pink - landscape shrub rose
#VALUE!
mild, understated-scented rose - delicate, spicy-herbaceous
-

Rosa pimpinellifolia Mary Queen of Scots

pink - landscape shrub rose
#VALUE!
medium-strength, noticeably scented rose - scent description not available
Robert Brown

Rosa pimpinellifolia Mon Amie Claire

pink - landscape shrub rose
#VALUE!
rose with a strong, clearly perceptible fragrance - scent description not available
Ivan Louette

Botanical Rose

Rosa pimpinellifolia Single Cherry

dark-red - landscape shrub rose
#VALUE!
medium-strength, noticeably scented rose - rich, spicy, classic wild-rose–rosy aroma
-

Rosa pomifera

pink - landscape shrub rose
#VALUE!
mild, restrained-scented rose - apple-fruity, slightly wild-rose scented
-

Rosa rubrifolia

pink - wild rose
6.6-9.8ft (200-300 cm)
mild, restrained-scented rose - delicately rosy character
Pierre André Pourret

Rosa watsoniana

pink - groundcover rose, landscape shrub rose
#VALUE!
very weak, barely perceptible scented rose - no noticeable fragrance
-

Roxburghii Lampion

pink - park rose
4.3-6.6ft (130-200 cm)
very weak, barely noticeable scented rose - subtle, rose character
Lens Roses

Stanwell Perpetual

pale pink - wild rose
2.6-4.3ft (80-130 cm)
very strong, garden-filling fragrance rose - deep, damask-scented
C. Brown

Professional supplement for garden roses

The United Kingdom’s mild but often windy and rainy oceanic climate means that rose success is determined primarily by local microclimates, winter minimum temperatures, wind exposure and soil type. The same variety behaves differently in a sheltered, south-facing urban front garden than in a windy, cooler, north-facing garden. Because of rainfall distribution, frequent freeze–thaw cycles and the wide range of soil types, it is especially important that the plant’s root zone can “settle into” the soil in a stable, long-term way. A major advantage here is that container-grown, own-root rose plants provide a well-regenerating, uniform foundation for everyday garden use and easy maintenance.

1) Planting window – variable, but a long season

Due to mild winters, the British season is relatively long, but sudden cold snaps and persistently waterlogged soil can occasionally interrupt favourable periods. For this reason, it provides reassurance to time planting flexibly, adapting to local conditions and soil status.

2) Microclimate – the strength of sheltered front gardens

Around family homes, sunny front gardens protected by walls are often warmer and less windy than open parts of the garden. In these spots, roses reward the more stable environment with longer flowering and more balanced growth.

3) Wind exposure – a drying effect even in a mild climate

In windy, exposed positions – especially in northern, coastal or higher-elevation areas – wind both cools and dries. In such places, more compact, well-rooted shrubs are less likely to lean over and retain their foliage more reliably.

4) Rainfall and freeze–thaw – stress on the root zone

High winter rainfall, standing water and occasional alternation of freeze–thaw cycles place significant stress on roots. In places where water drains away slowly, it is particularly valuable if the root system can penetrate down into deeper, well-aerated layers.

5) Soil types – clay, loam, chalky subsoil

Heavier clay soils can be airless in winter and may crack in summer, while chalky, lime-rich layers can cause rapid drying. Long-term rose performance is best in gardens where a well-structured, organic-matter-rich layer develops in the root zone.

6) Summer heat stress and occasional drought in the south

In some years in South and South East England, summers may be drier and warmer than usual, bringing higher water demand and stronger transpiration. In such periods, deep-penetrating roots reduce the impact of extremes on the garden’s appearance.

7) Humid periods and leaf-disease pressure

Cool, frequently rainy periods increase the risk of foliar diseases, which can affect the shrub’s vigour over time. In an environment where foliage dries quickly and is well ventilated, the plant remains healthy for longer.

8) Regional differences – southern cottage style, cooler northern gardens

In sunnier southern gardens, more abundant and longer flowering can be expected, while in cooler northern regions a shorter season is typical. In both environments, adaptability is what results in a rose garden that consistently “works”.

In average British family gardens – front gardens, ornamental areas around the home, smaller beds and borders – 2-litre, own-root container roses offer an easy-to-plan, flexibly adaptable solution. With smaller

rose groups of 1–5 plants, it is straightforward to create a tidy, flowering garden picture throughout the year, especially when the roses suit the character of classic British front gardens and cottage-style mixed plantings. In this way, the rose naturally “matures into” the existing garden, and can also be integrated easily into everyday care routines.

Overall, it can be said that, alongside the United Kingdom’s varied yet garden-friendly climate, with basic attention adapted to local conditions, own-root roses can be stable, reliable and beautifully developing elements of any family garden over the long term.
